Defect No.	Defect Description	Defect Severity	Test Case No. OR Description
1	If we were left on a page other than “/home”, and restart the web server, then refresh the page, HTTP 500 is returned.	2	2
2	When local port 8080 is occupied, the server will crash when launch.	3	1
3	If food with whitespace characters in its name is added to “MyFoods” and visit “/home” page, HTTP 500 is returned.	3	1
4	The slide show arrow left and right button are overlapped on each other, which cause the left button failed.	1	Test the basic function of home page. Base on common sense.
5	On the home page, the links to subdirectories of Earhart and Hillenbrand are swapped.	1	Test the basic function of home page. Base on common sense.
6	On the homepage, the slide show displayed a link to “The gathering place”, however after clicking this link, it results in 500 error	1	Links check on the homepage
7	On the Preference page, empty inputs can be accepted and added to “Preferences” and “Exclusions”		Invalid inputs should be checked and error messages should be showed.
8	On the homepage slideshow, if there exists any ‘e’ character except on the first place of the name of the restaurant, it turns out to be an ‘f’	1	Basic function check of the homepage slideshow
9	The links of MyFoods and Preference on Preference page are both link to home page.	1	Test the basic function of webpage.
10	The links on the upper right hand corner of the page of each webpage under /menu/* turns out to be ‘MyFoods’ instead of the original names	1	Test the links on the /menu/ pages
11	On the Preference page, the existing preferences or exclusions cannot be deleted.		4 Test the checkbox on the Preference.
12	On the page of each dining court menu, the open hour is not display correctly.	1	11

13	The link on the upper right hand corner pointed to “preference”on the page /preferences points to the home page rather than the preference page itself.	1	Link check on the preference page
14	On “/menu/*” pages, the link to the Preference page shown as “myFoods”.		Link and its description are not matched.
15	If some food is stored twice at the same time by different device or tab, the server will not record correctly because this is only a toggle events.	2	8
16	The date that is invalid such as Feb. 31st can be selected as the date to be viewed for the menu	2	14
17	The notification can only working when the food in “MyFoods” doesn’t contains a whitespace.	3	9
18	If we star a food that appear more than once on the menu, other item will not shown stored.	1	9
19	If “eggs” is entered in the exclusion preference, anything contains eggs will not be excluded, anything does not contains eggs will be filtered in the /menu/*	2	3
20	If we add vegetarian in the preference, the food which contains vegetarian are not marked.	3	3
21	In the dining court page, the address of dining court does not contains whitespace.	1	11
22	If we access other page like dining court menu immediately after we start the server, the page will not load.	3	2
23	The input box placeholder under the preference section shows “Add an exclusion”	1	3
24	Home button does not work on MyFood page	1	Check basic function of a webpage
25	On “/menu/*” pages, “BoilerHungry” logo will become “Boilerhungry”.	1	Spell error
26	The star besides item does not appear on firefox browser	3	Compatibility check

27	The wait time range does not work	2	Basic function check of webpage.
